Subject: URGENT: Out of Specification (OOS) Dissolution Result - Metformin HCl 500mg
Date Sent: 17-Sep-2026 08:30 IST

Dear Quality Assurance Team,

We are reporting an Out of Specification (OOS) deviation discovered during finished product release testing in the QC Analytical Laboratory.

Product Name: Metformin HCl Extended Release Tablets 500mg
Batch Number: MTH-2609-04
Batch Size: 120000 tablets
Source / Department: Quality Control Laboratory
Title: OOS Dissolution Rate Excursion at Stage S1 Testing

DETAILED INCIDENT DESCRIPTION:
During routine Stage S1 dissolution testing (Apparatus 1, Basket method, 100 rpm, 900 mL pH 6.8 buffer), six units of Metformin HCl 500mg tablets were analyzed. The specification requires Q = 80% dissolved at 45 minutes. Individual vessel results were 68%, 71%, 69%, 74%, 70%, and 67% (Mean: 69.8%), failing the minimum individual stage threshold of Q+5% (85%).

Notice: The testing was completed during the afternoon shift, but the exact date of occurrence was omitted from the analyst's hand-written bench sheet and needs formal confirmation.

IMPACT & RISK ASSESSMENT:
Severity: Major
Impact Category: Regulatory Compliance / Product Release
The batch has not been released to commercial distribution and remains held in the QC warehouse holding area.

Immediate Actions Taken:
- Staged all remaining retain samples for re-test protocol.
- Calibration check verified for Dissolution Station #3.
- Initiated Form OOS-INV-0914.

Best regards,
A. Verma
Senior QC Analyst, Analytical Development & Testing
